Volume Contents

NUMBER 1 JANUARY–MARCH 1983

Editorial 1

Design, Control System and Software Organization of Multi-purpose NMR Spectrometers. I. The Basic Requirements and Overall Design: A. F. Mehlkopf, A. Bax, J. Smidt and T. A. Tiggelman 3

Electron Paramagnetic Resonance Spectrometer Data Accumulation and Reduction System for Microcomputers: J. D. Lipscomb and R. W. Salo 11

Using a Hewlett–Packard Minicomputer for the Processing of Gamma-ray Spectra from Neutron Activation Analysis: P. L. Main and M. J. Hughes 17

Automated Control of a Mass Spectrometer Using a Central Minicomputer and Distributed Microprocessors: R. S. Stradling, P. A. Ryan and J. D. Wood 25

Curve Resolution of Electronic Absorption Spectra by Least-squares Methods as Applied to Transition Metal Compounds: A. Bartecki, J. Sołtowski and K. Kurzak 31

A Multipurpose Computer Interface for a Scanning Optical Spectrometer: D. Mihailovic, J. F. Ryan and W. J. Siertsema 39

Measurements of Fast Changes in Absorption and Fluorescence Spectra Using an OMA-System: E. Friz, G. Gauglitz, T. Klink and A. Lorch 49

NUMBER 2 APRIL–JUNE 1983

Recent Advances in the Structure Elucidation System, CHEMICS: H. Abe, I. Fujiwara, T. Nishimura, T. Okuyama, T. Kida and S.-I. Sasaki 55

Apple II Interface to a Biomation 1010 Transient Recorder. A Powerful Spectroscopic Signal Averager: R. T. Bailey, F. R. Cruickshank and N. Wagstaffe 63

Interfacing a Microcomputer to an Analytical Instrumentation through an RS 232C Standard Interface: a Simple Software Implementation: L. Fornari and G. Tessari 71

Microprocessor Driven Electron Spin Resonance (ESR) Spectrometer: F. Momo, G. A. Ranieri and A. Sotgiu 79

The Use of Computers in the Processing of Large Arrays of Spectroscopic Data: M. Kh. Salakhov, I. D. Grachev and I. S. Fishman 83

COMEDY: A Microcomputer Based System for Controlling Pulsed Dye-Laser Experiments: H.-D. Kronfeldt and S. Wasserroth 89

Use of an Apple II plus Microcomputer as a Multichannel Analyser for X-ray Fluorescence Spectrometry: K. Borowski, I. L. Preiss, J. J. La Brecque and C. Pauley 99

Software for Deconvolution of Overlapping Spectral Peaks and Quantitative Analysis by ^{13}C Fourier Transform NMR Spectroscopy: A. Kumar, C. H. Sotak, C. L. Dumoulin and G. C. Levy 107

VOLUME CONTENTS

NUMBER 3 JULY–SEPTEMBER 1983

Editorial 115

Identification of Multicomponents in Mixed Mass Spectra by Library Search System: A. Yasuhara, J. Shindo, H. Ito and T. Mizoguchi 117

A Smart Algorithm for Accelerating the Data Collection on an X-ray Diffractometer: J. M. Quitin, H. Van de Velde and G. Platbrood 125

Design, Control System and Software Organization of Multi-purpose NMR Spectrometers: 2—Spectrometer Control, Data Acquisition and On-line Data Processing: A. F. Mehlkopf, A. Bax, J. Smidt and T. A. Tiggelman 131

The Use of a Computer Controlled Luminescence Spectrometer in the Study of the Time Resolved Emission of Trivalent Europium in Yttrium Oxide: A. T. Rhys Williams and M. J. Fuller 145

Data Acquisition and Spectrometer Control with a Rockwell AIM-65 Microcomputer: D. Bianchi, F. Cavatorta and G. Lenzi 151

Optimization of Parameters for Fourier Self-deconvolution: 1—Minimization of Noise and Side-lobes without Apodization: W.-J. Yang and P. R. Griffiths 157

SHORT COMMUNICATIONS

Adaptation of the Top-hat Filter for Data Acquisition in Magnetic-sector GC/MS Instruments: A. D. Graddon, J. F. Smith and J. D. Morrison 167

Curve Resolution by Computer: a Caveat: G. Snatzke 171

NUMBER 4 OCTOBER–DECEMBER 1983

Application of Membership Function to Automated Structure Analysis of Infrared Spectra of Organic Compounds: Y. Ishida and S. Sasaki 173

Advantages of UNIX Based Laboratory Data Processing: R. L. White. 185

A Microcomputer Based Digital Data Acquisition and Manipulation System for Raman Spectroscopy: M. Diem 191

Microcomputer Controlled Decoupler for NMR Spectroscopy: V. Sklenář, I. Krejči, V. Húsek and Z. Starčuk 201

A Microcomputer Network for Intelligent Linkage of Spectroscopic Instruments: H. Susaki and S. Minami 209

The Use of Computers in the Investigation of Optically Thick Inhomogeneous Plasmas by Their Emission and Absorption Spectra: M. Kh. Salakhov, E. V. Sarandayev and I. S. Fishman . . 213
